Elro Trade

Components for industrial
automation

Elro Projects is an innovative technological department that offers electrical panel building and custom-made solutions for electrical drive and control applications.

Elro Projects' panel-building department assembles electrical panels for marine, offshore, food, hoisting and lifting applications and for the machine-building industry. Most customers provide Elro with the electrical schematics and the bill off materials.

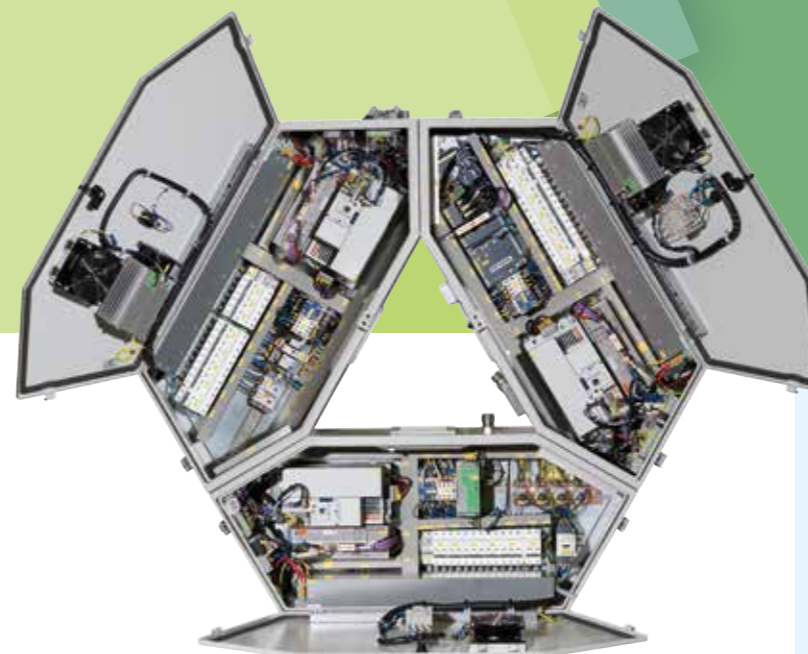

Elro Projects consists of 4 disciplines:

- electrical engineering
- panel building,
- installation,
- after-sales service.

E-plan P8

Elro Projects' engineers use E-plan P8 to produce the production drawings. The software engineering department is experienced in all well-known PLC brands, including Bachmann, Siemens and Allan Bradley. The department also has considerable drive technology experience with various A-brand frequency inverters and motors including Vacon, Siemens, ABB, Schneider Electric and Emerson.

Classification societies

Marine and offshore projects are engineered in accordance with DNV, Lloyds, BV, CCS and other classification societies.

Serial Panel Building

For European Customers, Elro has adapted a lean manufacturing process for serial panel building. All processes are executed according to Elro's ISO 9001 system. The high qualified panel builders, trained at Elma in the Netherlands, guarantee that the panels are assembled according to the customers requirements and material specifications. Due to the low labour costs and the advantageously priced electrical components, Elro can supply at very competitive prices.

high-quality products

About ELRO Romania

SC Elro SRL Romania, where do you find us?

Elro SRL is a subsidiary of the Dutch company Elma BV and was established in 2002 in Romania. Elma BV has been a service provider for electrical drive and control technology for many years.

Elro is located in Constanta near the Black Sea, the main gateway to Eastern Europe. As a panel builder, Elro supplies to European customers. Furthermore Elro sells components for industrial automation on the local Romanian market.

- > Autec (radio remote control stations)
- > Spohn & Burkardt (controllers, joysticks, operator consoles, resistors and more)
- > AKAPP (power lines)
- > Kraus (slip-ring collectors and contacts)
- > Tecno Electrica Ravasi (limit switches)
- > Elma Motors (low, medium and high-voltage motors)

What fits for you?

Elro Trade sells components for industrial automation. Our employees have thorough knowledge of the products and can give you advice on what product fits your requirements the best. Elro Trade is a representative and importer of high-quality products. These products satisfy the strictest international guidelines and are produced by a range of impressive national and international manufacturers:
